In re Patent Application of: **ROBERT M. HERRIN**Serial No. **10/721,962**

Filing Date: 11/25/2003

In the Specification:

Please amend Paragraph 0029 as follows:

[0029] With continued reference to FIG. 3, a forming rail 114 is positioned downstream the first position 106 for receiving the blank 200 and folding peripheral portions 204 thereof, wherein a proximal portion 116 of the forming rail partially folds the peripheral portions **204** of the blank and a distal portion **118** of the forming rail secures the blank as a partially formed tray 206, illustrated with reference to FIGS. 4 and 5, to be further detailed later in this section. With continued reference to FIG. 4, a first folding arm 120 is pivotally carried by the frame 112 and positioned for biasing against an extended portion 208 of the partially formed tray 206 for a folding thereof, the first folding arm 120 being positioned proximate and downstream the distal portion 118 of the forming rail 114, as illustrated with reference again to FIG. 3. A compression plate 122 is pivotally carried by the frame 112 and in a spaced relation to the partially formed tray 206. A fixed plate 124 is carried in a spaced relation to the compression plate 122 to form a passage 126, to be further detailed later in this section. A second folding arm 128 is carried by the frame 112 and positioned for pivoting and biasing against the extended portion 208 of the partially formed tray 206 for folding the extended portion through the passage 126.

Please amend Paragraph 0038 as follows:

[0038] With the partially formed tray 206 secured in the second position 108, as illustrated with reference again to FIG. 4, by way of example, the platen 102 is retracted and the folding of the top wall portions 232 and the outside corner support members 238 commence. With reference again to FIG. 2, and to FIGS. 10 and 11, the first

In re Patent Application of: ROBERT M. HERRIN Serial No. 10/721,962 Filing Date: 11/25/2003

folding arm 120 is operable for folding the top wall portion 232 about the fifth fold line 236 to a position generally parallel to the bottom panel 210. The side fold portion 246 is partially folded about the sixth fold line 240 by passing through the passage 126 formed by the spaced compressed compression plate 122 and the fixed plate 124. As earlier described, the compression plates 122 are moveable for biasing against each of the side fold portions 246. A squared inside corner is illustrated by way of example in FIG. 10, wherein a squared corner platen 103 would be employed.
